                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antilarteriosclerotic, immunomodulatory, cytostatic, antilasthmatic, antilarteriosclerotic, hepatotropic, antidabetic, anti-gout, antithyroid, neuroprotective, antiarthritic, osteopathic, antipsoriatic, antithyroid, and antitheumatic activities, and can be used in gene therapy. The polynucleotide sequences can be used to express the protein sequences. Pharmaceutical compositions comprising FLEXHT can be used to treat diseases or conditions associated with altered expression of functional FLEXHT. The proteins and polynucleotides can be used to diagnose and treat disorders including anaemia, epilepsy, arteriosclerosis, developmental disorders, cancers, and immunological disorders such as asthma, bronchitis, cirrhosis, Crohn's disease, diabetes mellitus, gout, Grave's disease, multiple sclerosis, osteoparthritis, pancreatitis, psoriasis, rheumatoid arthritis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAC88070 to AAC88124 encode the 55 FLEXHT (full-length molecules expressed in human tissues) proteins given in AAB36579 to AAB3633. The present invention describes an isolated polypeptide (A) comprising an amino acid sequence selected from one of 55 amino acid sequences 42-876 residues in length, corresponding to FLEXHT-1 to FLEXHT-55, a 90 % identical sequence, and a biologically active or immunogenic fragment of the sequence. The FLEXHT proteins can have antianaemic, anticonvulsant,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2001-016234/02.

CC ARF25159 represents a shorter version of the present sequence. The protein possesses a hydrophobic domain and so is a secretory protein cor a membrane protein. The protein is used as an antigen to prepare antibodies. The polynucleotide sequence is useful as a source of probes cor antibodies. The polynucleotide sequence is useful as a source of probes cor genetic diagnosis. It is also useful for producing the protein cor in large quantities and for gene therapy. The enkaryotic cells are used for detecting the receptors or ligands corresponding to the protein and cor for detecting small novel pharmaceuticals. The antibodies are also used for detection, quantification and purification of the proteins both the sources or supplements. The protein may have cytokine and cell cortein and polynucleotide may be used in research or as nutritional corresponding to the protein sources or supplements. The protein may have cytokine and cell cortivity, hematopoiesis regulating activity, timmune stimulating or suppressing activity, through activity, hemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity and tumour inhibition activity. It may therefore may be used to threat inmune deficiencles resulting from autoimmune disorders or infectious diseases, cancer, sepsis, anaemias, burns and ulcers, cor immune response and enhance coagulation or inhibit thrombosis.

This sequence is expressed in nervous, gastrointestinal and reproductive tissues. HRAP has cytostatic, immunomodulatory, antiinflammatory, cardiant, antiarteriosclerotic, hepatotropic, antiarthritic, antidiabetic, osteopathic, antialergic, antianaemic, antiasthmatic, antidiabetic, dermatological and neuroprotective activities. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with HRAP expression, especially cell proliferative, autoimmune/inflammatory, reproductive, cardiovascular and gastrointestinal disorders (e.g. atherosclerosis, cirrhosis, leukaemia, cancer, AIDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human receptor-associated proteins (HRAP) useful for the dia

CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC the expression level to an expression of Gs is indicative of GCA. CC Also included are modulating (M2) GA by contacting GC with an agent capable of modulating (M2) GA by contacting GC with an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the treating (M3) an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (M5) an inflammation (especially creating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the creating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having GCA inflammation with an agent that modulates the expression of gene(s) cromages in a subject capable of modulating GCA in an inflammation (especially chronic) or in a tissue, and capable of modulating GCA in an inflammation (especially chronic) or in a tissue, and inflammation (especially chronic) or in a tissue, an allergic cresponse in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subject capable of modulating GCA in a subj

The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from thepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cycostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, converse that can be used to monitor disease states, disease progression, converse that can be used to monitor disease states, disease progression, converse that can be used to monitor disease states, disease progression, converse the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat figure in the patient of the printed specification, but was obtained in electronic format directly from WIPO cat figure in the patient did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat figure in the patient did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat figure in the patient did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat figure in the patient did not form part of the printed specification, but was obtained in electronic format directly from WIPO cat figure in the patient did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical eagent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a cresult of M1, and the data is sufficient to convey the chemical constructure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, scomach, lung, thyroid, cosophageal, ovarian, kidney, prostate or pancreatic cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The present sequence encodes a human protein with hydrophobic domains. ARF25169 represents a longer version of the present sequence. The protein possesses a hydrophobic domain and so is a secretory protein or a membrane protein. The protein is used as an antigen to prepare antibodies. The polynucleotide sequence is useful as a source of probes for genetic diagnosis. It is also useful for producing the protein in large quantities and for gene therapy. The eukaryotic cells are used for detecting the receptors or ligands corresponding to the protein and

The antibodies are also used for detection, quantification and purification of the proteins. Both the protein and polynucleotide may be used in research or as nutritional sources or supplements. The protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, hematopoiesis regulating activity, tissue growth activity, activiny, hinhibin activity, receptor/ligand activity, and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity and tumour inhibition activity. It may therefore may be used to infectious diseases, cancer, sepsis, anaemias, burns and ulcers, periodontal disease, Parkinson's disease, induce fertility, improve immune response and enhance coagulation or inhibit thrombosis.

CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polymucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC diagnostic coding sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
cc specification, but was obtained in electronic format directly from WIPO
cc at ftp.wipo.int/pub/published_pct_sequences.

(I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1867
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID No

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
CC The invention relates to novel isolated lung cancer antigen CC polynucleotides (I) and polypeptides (II). (I) and (II) are used to CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) are CC also used in diagnosing a pathological condition or susceptibility to a CC pathological condition, in particular, lung cancer. The antibodies to CC (II) can also be used in alleviating symptoms associated with the CC clinked immunosorbent assays (ELISA) bisorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthirtis, CC hyperproliferative disorders e.g. neoplasms of the breast or liver, CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infections. The polypeptides can also be CC used to aid wound healing and epithelial cell proliferation, to prevent CC supporting cell culture of primary tissues, to regenerate tissues and in C cenebrasis. AASJOSBO-AASJOSBS represent novel human lung cancer antigen CC coding sequences, PCR primers and related sequences of the invention. CC printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; lung cancer; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; nootropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; autoimmune disease; rheumatoid arthritis; neoplasm; hyperproliferative disorder; cardiovascular disorder; anglogenesis; nervous system disorder; Alzheimer's disease; infection; skin aging; nervous system disorder; Alzheimer's disease; infection; skin aging;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-JAN-2000; 2000US-0179065.

```
The present invention relates to the isolation of novel human creapiratory antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the cinvention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), clung disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polymucleotide sequences of the invention are useful in gene therapy and antisense therapy.

CC AAS28161-AAS28764 represent genomic sequences encoding for novel thuman respiratory antigens.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fifth the printed specification, but was obtained pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
